

ABSTRACT OF THE DISCLOSURE

- A simplified image display control interface provides easy and convenient retrieving and viewing of digital images captured by a digital camera. Two control buttons provide for scrolling backwards or forwards through a plurality of captured
- 5 images displayed on a display and stored in the digital camera memory. When the oldest captured image has been displayed, subsequent actuation of a control button causes the display to be turned off. When the most recently captured image is displayed, subsequent actuation of another control button causes a live preview to be displayed.
